

cnc|data|clip®

Set order in managing your tools

SWISS  MADE

And this is how it works

On the front part of the plastic clip is a location for the positioning of a label. The placement of the sticker on this side is very simple. This provides the user with considerable time savings, as the tool can be easily and quickly assigned.

As a result of this clip, your tool management is going to be significantly easier and a confusion due to lacking or missing labeling will be eliminated.

The machine-fixed clip storage system is an essential assistance. When the tool is placed, the operator removes the **cnc|data|clip** and place it on the stand in the adequate numbered position. So the operator is always informed on the position of his tools.
